TRADING SYSTEMS NETWORK ENGINEER - IT - LIMASSOL – CYPRUS - AP15105

We are currently seeking a Trading Systems Network Engineer to join our client, a growing international company.

As a Network Engineer, you will interface with all levels of the company users and take full ownership of our production trading systems. You must be able to handle all aspects of the network management, data security, reliability and application support as needed.

The Network Engineer must have a customer service mindset with the experience dedication and self-motivation to in a fast paced work environment. The candidate should have excellent attention to detail and be prepared to respond and resolve any network, hardware or software issues for all levels of the organizations users including outside business hours.

THE MAIN DUTIES WITHIN THE ROLE WILL BE:
- Improves network systems and processes by studying operations and problems; recommending process changes; anticipating potential problems resulting from the changes; and designing and implementing software and/or configuration operational changes.
- Take full ownership of maintenance and engineering of Production Trading Systems
- Design, deploy and maintain networking equipment including infrastructure hardware and network management tools, routers, switches, firewalls, and WAN optimization equipment and wiring.
- Demonstrate ability to implement, document and properly maintain robust network security solutions, e.g. firewall, anti-virus and spyware, spam watch, website filtering, black list surveillance, etc.
- Troubleshoot infrastructure and application performance issues.
- Responsible for administration of Firewall and VPN infrastructure.
- Proficiency in Internet and remote (VPN, BGP) connectivity
- Maintains network monitoring equipment
- Maintains communications system requirements including WAN, Internet and Broadband connections to all sites.
- Adhere to the highest degree of professional standards and strict confidentiality in matters that require discretion.
- Act as the Network Engineer on network projects providing guidance to other team members.
- Maintain current knowledge of network technology advancements and the IT environment, shares knowledge with team members and makes recommendations to the organization.
- Provides recommendations on architectural changes and design enhancements to the infrastructure to improve reliability and performance, reduce cost, and anticipate company growth.

REQUIREMENTS:
- Bachelor's or higher degree in Computer science
- 5-6 years' of experience and knowledge of Data Communication, Internet Technologies, Fire Walls Security (VPN), Routers, WAN and LAN.
- 2-3 years' experience in providing support and engineering for FIX API based Trading Systems
- Experience configuring network components, e.g. router, switch, servers, workstations, printers, copiers, etc.
- Strong knowledge in the principles of Network Technology, including but not limited to Network Strategies, Carrier Offerings Design, VPN solutions and Cisco Platforms.
- Deep understanding of IP networking: Cisco, TCP/IP, Window Server, Network Security, Cloud Servers.
- Proficient with Microsoft Office, including Word, Excel, and PowerPoint.
- Demonstrated ability to coach, mentor, and supervised junior members of the team.
- Experienced working for a financial services company is a plus.
- Eager to work in a collaborative, team environment.
- Detailed oriented, analytical mindset, highly effective at decision making.

Due to the high volume of applications we receive, only shortlisted candidates will be responded to.
