- Set up testing environment and required equipment
- Analyzing, submitting and tracking bug and submitting test report with clear steps to reproduce
- Working with product designers and developers at all stages to promote quality
- Work with Developers and Product team to understand project requirements and create real-world test cases and use cases
- Make recommendations to improve product reliability, performance, and quality assurance best practices and processes
- Investigate and evaluate new testing technologies and products for application within the environment
- Verifying the load, scalability, and performance requirements have been met
- Be part of a small and lean team with a strong focus on delivering results
- Understand business requirements and identify solutions
- Deliver high-quality production software on schedule supplying a solid infrastructure for the regression and performance testing,
- Handle multiple tasks and efficiently prioritizing responsibilities
- Review requirements, specifications, user documentation and other project documentation to assure quality of the products and tests to be developed.
- Understand the role of testing within the software development lifecycle and business-related project constraints

### **REQUIREMENTS:**

- 5+ years of experience in a Quality Assurance in testing complex systems and applications
- Experience in developing and maintaining test suites through formal methods of test design to ensure optimal test coverage.
- Defect tracking and use of test management tools
- Experience in developing and maintaining any of smoke, performance, functional, and regression tests to ensure code is functioning as designed
- Managing defect tracking and resolution processes so that a consistent, documented process is used and followed
- Conduct root cause analysis of identified defects, providing development teams with sufficient details to understand, replicate and resolve the defect
- Must have deep knowledge of bug tracking systems and methodologies
- Proven experience working on Linux and scripting
- Understanding of the software release process
- Excellent written and spoken communication skills in English
- Preferred Bachelor's degree in Computer Science from a known university
- Professional & Academic Qualifications (CySEC exams/ACCA/ACA, etc)
